

## Student Survey Analysis

2014-2015 academic year

In the current academic year, a student survey was conducted to evaluate the teaching courses and lecturers. In the survey, students of one-step educational program and postgraduate students were participated. The survey results were summarized according to the following criteria: sum, arithmetic mean, median, standard deviation. The questionnaire provided opportunity for making additional comments. According to the overall consensus obtained at the Quality Assurance Department, the score between 2.5 - 5 was considered as positive, scores between 1 - 2 was considered as unsatisfactory, and within the interval 2 - 2.5 as problematic assessments.

### **1. Results of the one-step educational program students' survey.**

The average assessment range was from 3.2 to 5 points in all directions.

The comments in the questionnaire were mainly focused on the request to improve the environment of teaching at the building of Faculty of Medicine, increase practical classes and update the literature.

The results of the survey of one-step educational program students showed low activity.

### **2. Results of survey of master (postgraduate) students.**

The average assessment range for all modules was within 4.3 – 5.0 points.

The comments in the questionnaire were mostly positive; generally positive feedback was given to the learning process.

It should be noted that the majority of students (95%) participated in the survey.

***General comments.*** During the survey, there were no unsatisfactory or problematic assessments about the Faculty of Medicine.

Generally, assessment of Master student was higher.
